IMPORTANT INFORMATION

FOR USE ONLY AS AN ELICITOR OF PLANT NATURAL DEFENCE MECHANISMS

Crop:	Winter wheat
Maximum individual dose:	1 litre product per hectare
Maximum no. of treatments:	One (per crop)
Latest time of application:	Before first node detectable stage

READ THE LABEL BEFORE USE. USING THIS PRODUCT IN A MANNER THAT IS INCONSISTENT WITH THE LABEL MAY BE AN OFFENCE. FOLLOW THE CODE OF PRACTICE FOR USING PLANT PROTECTION PRODUCTS

To avoid risks to human health and the environment, comply with the instructions for use

Manufacturing date & Batch No: *see bottle*

SAFETY PRECAUTIONS

Environmental protection

Do not contaminate water with the product or its container. Do not clean application equipment near surface water. Avoid contamination via drains from farmyards and roads.

Storage and Disposal

KEEP IN ORIGINAL CONTAINER, tightly closed in a safe place.

WASH OUT CONTAINER THOROUGHLY, empty washings into spraytank and dispose it safely.

Net content : 5 L
(1,06 gallon)
Net weight 5,28 kg

VACCIPLANT®

DIRECTIONS FOR USE

IMPORTANT: This information is approved as part of the Product Label. All instructions within this section must be read carefully in order to obtain safe and successful use of this product.

VACCIPLANT is not a fungicide, it stimulates the defence mechanisms of the plant and increases the plants resistance to diseases, whilst maintaining the final yield. VACCIPLANT replaces the first fungicide application of a conventional programme to protect against leaf spot and powdery mildew.

DISEASES CONTROLLED

- Leaf spot (*Septoria tritici*): VACCIPLANT provides prolonged protection for 40 days, but not after flag leaf. After this period if the risk of re-infection is high then further applications of approved fungicides will be necessary .
- Powdery mildew: VACCIPLANT protects the crop by decreasing the mildew pressure. If the infection risk is high, then treat with a specific fungicide.

CROP-SPECIFIC INFORMATION

Application

Apply VACCIPLANT in 50 to 500 litres of water per hectare. The higher spray volumes are recommended where the crop is dense to ensure good penetration to the lower leaves and stem bases.

A pressure of 2-3 bars (30-40 psi) is recommended.

Good spray cover of the target is essential. Ensure that the sprayer is in good condition and the correct nozzles are fitted.

Apply VACCIPLANT as a medium quality spray (as defined by the BCPC).

Winter wheat

VACCIPLANT may be used on all varieties of winter wheat at the dose of 1 litre per hectare.

VACCIPLANT must be sprayed one time between full tillering stage and 1 cm ear stage (GS 30).

MIXING

Thoroughly shake the pack before use. Add the required quantity of VACCIPLANT to the half-filled spray tank with the agitation system in operation and then fill to the required level. Continue agitation at all times during spraying until the tank is completely empty. Spray immediately after mixing. Do not store the mixture overnight.

Triple rinse container before disposal and do not re-use container for any purpose.

COMPATIBILITY

VACCIPLANT is compatible with the usual growth regulators and fungicides.

The mixture must be done according to the regulation and official good practices.
